I'm an **AI Engineer** with an **MSc in Artificial Intelligence** from Paris-Saclay University. I **design, train, deploy and monitor end-to-end AI systems in production**, turning raw data into reliable services at scale through **MLOps practices** and **automated CI/CD pipelines**. I am seeking a **full-time AI Engineer or Data Scientist role**, and I am available **immediately**.

EDUCATION

MSc Artificial Intelligence — Paris-Saclay University, France	Sept 2025 – Sept 2026
MSc Mathematics, Vision, Learning — ENS Paris-Saclay, France	Sept 2024 – Sept 2025
MSc Artificial Intelligence — ESIEE Institute of Technology, France (gap year 2023–2024)	Sept 2022 – Sept 2024
BSc Applied Mathematics — Sup'Management Engineering School, Gabon	Sept 2017 – Sept 2019

PROFESSIONAL EXPERIENCE

Machine Learning Engineer | Full-Time Internship | Nokia, France Apr 2026 – Sep 2026

- Built **ETL pipelines** to collect and structure **large-scale signal datasets**, ensuring quality and consistency for modeling.
 - Designed and trained **deep learning architectures (CNN, ResNet, Transformer)** using **supervised, semi-supervised and self-supervised learning**.
 - Benchmarked model performance through **statistical analysis and A/B testing** against reliability and generalization criteria.
 - Ran scalable **GPU training on AWS SageMaker**, tracked experiments with **MLflow and Kubeflow**, and containerized deployments with **Docker**.
 - Wrote **HLD/LLD documentation** and presented results and recommendations to business and engineering teams to guide technical decisions.
- Technologies:** Python, PyTorch, TensorFlow, Scikit-learn, Transformers, LLMs, RAG, AI Agents, MLflow, Kubeflow, AWS SageMaker, Docker, Git, CI/CD, CUDA, Deep Learning, Computer Vision, NLP

Machine Learning Engineer | Full-Time Internship | SEGULA Technologies, France Apr 2025 – Sep 2025

- Built **data pipelines** to collect and clean **high-dimensional datasets**, applying **feature engineering** to improve usability for modeling.
 - Designed **neural network models (Autoencoders, LSTM, GNN)** to forecast system behavior, packaging them with **Docker** for training on **AWS EC2/S3**.
 - Assessed model stability through **error analysis and statistical testing**, adjusting training strategies to improve prediction accuracy.
 - Deployed and monitored models in production**, tracking performance to ensure reliability over time.
 - Used **RAG and agentic AI** techniques to automatically generate enriched presentation materials shared with partners.
- Technologies:** Python, PyTorch, TensorFlow, Scikit-learn, Pandas, LSTM, Autoencoders, GNNs, Transformers, LLMs, RAG, AI Agents, AWS EC2, AWS S3, Docker, Git, CI/CD, CUDA

Machine Learning Engineer | Full-Time Internship | Evolukid, France Jan 2024 – Jun 2024

- Built **ETL pipelines** to structure and annotate **multimodal datasets**, supporting model training and evaluation.
 - Built and **fine-tuned models** for **intent recognition** and **visual content detection**, combining text and image understanding.
 - Validated model performance under **real-time conditions** through **A/B testing**, guiding improvements to user experience.
 - Deployed models to production on **Microsoft Azure** using **Docker**, and integrated them into a real-time mobile application built with **React Native**.
 - Used **RAG and agentic AI** techniques, built on **Azure cloud and AI services**, to develop an internal **chatbot** system for the company.
- Technologies:** Python, PyTorch, TensorFlow, Scikit-learn, Pandas, NLP, Computer Vision, LLMs, RAG, AI Agents, Vision-Language Models, BERT, YOLO, Hugging Face, LangChain, FastAPI, React Native, Microsoft Azure, Docker, Git, CI/CD

Software Engineer | Full-Time Internship | Fujitsu, France Apr 2023 – Sep 2023

- Built **ETL processes** and managed application data using **SQL and PostgreSQL**, ensuring accuracy and consistency.
 - Built **backend services and APIs** to support data-driven business applications.
 - Deployed applications on **AWS EC2** with **CI/CD**, proposing algorithmic improvements for **parallel/distributed processing**.
 - Monitored application performance** and handled incident support, collaborating with development and business teams on operational needs.
- Technologies:** Python, JavaScript, Angular, SQL, PostgreSQL, AWS EC2, Docker, Git, CI/CD, APIs, Parallel Computing, Distributed Systems

Machine Learning Engineer | Part-Time Internship | Applied Artificial Intelligence Lab, France Oct 2022 – Feb 2023

- Built **ETL pipelines** to collect and process **heterogeneous text and image datasets** for document understanding.
 - Designed **CNN and Transformer models** to extract and represent information from complex documents.
 - Analyzed model outputs through **statistical error analysis** to refine extraction accuracy across iterations.
 - Packaged inference workflows into **APIs**, hosted data on **AWS S3** for scalable access, and presented technical results to support research decisions.
- Technologies:** Python, PyTorch, TensorFlow, Scikit-learn, Pandas, NLP, Computer Vision, Transformers, LLMs, RAG, AI Agents, Docker, Git, AWS S3, APIs

PROJECTS

AI-Powered Investor Intelligence Platform with Retrieval-Augmented Financial Reasoning Jan 2026 – Mar 2026

- Built an **ETL pipeline** to parse, clean and **semantically chunk** financial reports, generating **embeddings** for indexing and retrieval.
 - Combined **vector search** with a **large language model** to extract structured **financial KPIs** grounded in the retrieved document context.
 - Assessed **retrieval relevance and extraction accuracy** through error analysis across companies and fiscal years to guide improvements.
 - Deployed the **"Ingestion → Retrieval → Insight"** pipeline on **Azure Kubernetes Service**, with **automated CI/CD pipelines** and an **analytics dashboard** to monitor KPIs in production.
- Technologies:** Python, LangChain, Azure OpenAI, Azure AI Search, Embeddings, Vector Search, RAG, LLMs, AI Agents, FastAPI, PostgreSQL, Docker, Azure Kubernetes Service, Git, CI/CD

Instruction-Following Multimodal Agent with Vision-Language-Action Reasoning Jan 2025 – May 2025

- Built a **data pipeline** to collect and preprocess **multimodal data (text and image)** for training and testing the agent.
 - Combined **visual embeddings** with a **large language model** through **cross-attention** to align image and text representations.
 - Assessed reasoning and decision accuracy through **statistical analysis** across varied instruction scenarios to guide improvements.
 - Deployed the **"Observation → Reasoning → Action"** pipeline on **Azure Machine Learning**, with **automated CI/CD pipelines** and **monitoring dashboards** to track performance in production.
- Technologies:** Python, PyTorch, C++, CUDA, LangChain, Transformers, Multimodal Learning, Azure Machine Learning, CI/CD, Monitoring

TECHNOLOGIES AND LANGUAGES

- Languages:** Python, C++, SQL, JavaScript, CUDA, Bash
- ML & AI:** PyTorch, TensorFlow, Keras, Scikit-learn, Pandas, NumPy, Hugging Face, Transformers, LangChain, OpenCV, LLMs, VLMs, RAG, AI Agents
- MLOps & Cloud:** AWS (SageMaker, EC2, S3), Microsoft Azure (OpenAI, AI Search, AKS), Docker, Kubernetes, MLflow, Kubeflow, FastAPI, PostgreSQL, Git, CI/CD, Linux
